

Innovating the Future of Cyber Security

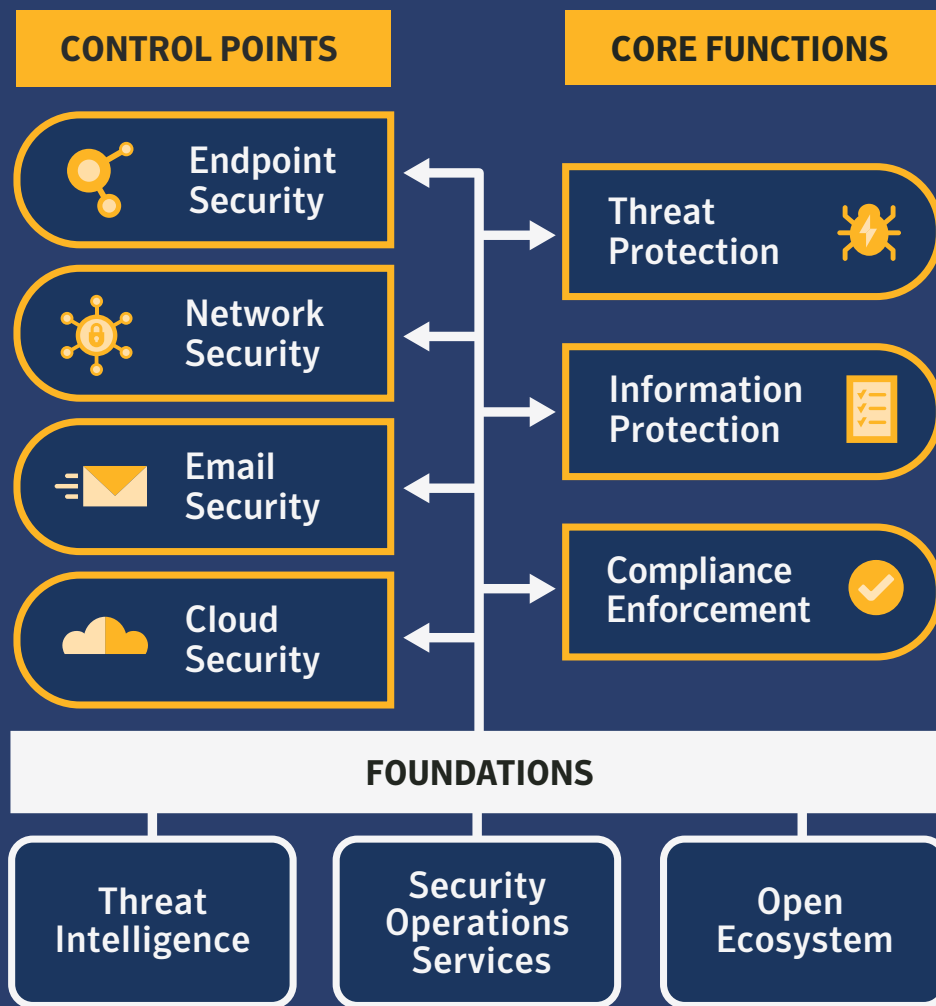

Our Integrated Cyber Defense Platform delivers threat protection, information protection and compliance across endpoints, networks, email and cloud applications.

Symantec is the first company to unify security for cloud and on-premises systems, allowing enterprises to embrace the cloud without scrapping their investment in security controls. Our Integrated Cyber Defense Platform delivers threat protection, information protection and compliance across endpoints, networks, email and cloud applications.

The platform is powered by the largest civilian threat intelligence network, deep security research and operations expertise, and a broad technology ecosystem – working together to enhance security controls, improve visibility, and reduce cost and complexity for businesses worldwide.

 **Symantec™** Securing the cloud generation

INTEGRATED CYBER DEFENSE PLATFORM

CONTROL POINTS

Integrated Cyber Defense helps businesses manage security via four critical control points, which can be used to govern information access and inspect and terminate threats.

FOUNDATIONS

Symantec's Integrated Cyber Defense Platform is powered by the industry's best intelligence, SecOps services and open ecosystem, which fuel dynamic and proactive security while reducing operational cost and complexity.

CORE FUNCTIONS

Integrated Cyber Defense provides three core security functions that work effectively within and across all control points.
